Gladioli Clovena Hybrids

New Creations in Form and Color

The Finest Mixture in Cultivation

IN THE Clovena Nurseries, "Home of the Pansy and Gladiolus," we have been perfecting and growing for several years, a new class of Gladioli—**Clovena Hybrids**, which has become famous wherever grown or seen. We secured the finest strains and races known to the world, from which again the newest and rarest types were selected from which to grow seed, after being crossed polonized, and this seed was planted alongside with the most costly hybridized seed procurable abroad and at home. The soil in Clovena is especially adapted to the perfect development of the Gladiolus from seed or bulblets, by reason of its special character and condition of moisture, hence we have successfully grown hundreds of thousands of Seedling Bulbs, comprising so wide a range of form and color, many of which are original with Clovena Hybrids and therefore are new creations, that they are indescribable.

It has been demonstrated that we can grow finer and better Pansies both as to quality of bloom and vigor of plants, cheaper by reason of natural advantages of soil and moisture, than any grown in the U. S. and the same conditions apply as well to the Gladioli; making it possible for us to produce quickly **THE BEST**, at less cost, than the old types and colors generally grown for commercial purposes. To partially illustrate that we have succeeded beyond all expectation, we have had made a dozen half-tone cuts from photographs taken at our Nurseries, of a few of the forms as found in **Clovena Hybrids**. These cuts give only a faint idea of the wide range in colors, markings and shadings. We can as readily increase and secure more cheaply a stock of the rarest sorts, than the common old red kinds by the old methods. We therefore are enabled to offer in the Clovena Hybrids a mixture that contains new types, forms and colors that when procured of the modern Hybrid Specialists would cost five to ten times as much. In fact we will guarantee that not a single old or common flowering type can be found in this stock and while we offer the stock at much less than the ordinary hybrids, the quality will be far superior to any half-dozen special strains, no matter under what names they are sold.

Last summer, when preparing for market, a single day's "cut," which often exceeded 10,000 spikes of bloom, visitors in

trying to find duplicate flowers among Clovena Hybrids, would find the task an interesting study. The first impression was, that many forms and colors were duplicated, but when making close comparison a greater or less variation was found which made each distinct, so that when we state that this mixture contains over 10,000 distinct types, forms, colors, shadings and markings no exaggeration is made. As the half-tone cuts represent we have new styles, shapes and forms in the gladioli that are wide departures from the old *Gandevensis* type. The widest diversity is found in the colors and markings. There are purest white and shades of white with intricate markings; yellows, from lemon to salmon, orange, in shades of canary, chrome and buff; creams, blushes, apple and peach blossom, pinks, rose, cerise, lavender, heliotrope, blue, scarlet, cherry, crimson, purple, bronze, brown reds, maroon, chocolate, slate, smoke colors in all the varying shades. Many delicately striped, marked splashed, flamed, margined, variegated, speckled, suffused, veined, marbled, blotched, feathered and penciled; some in porcelain hues and tints; others in Orchid colorings and textures, also soft effects of the Begonia—speckles and velvets of the Gloxinia, in endless combinations and creations, beyond human portrayal or description. Nature has responded so bountifully in the grand and varied breaks in Hybrid Gladioli that the modern blooms far excel the old standard named kinds. Those striving to work up a stock of say 300 to 500 new and distinct named kinds, are wasting much valuable time and will soon fall behind in the ranks, as the distinct variations run away up in the tens of thousands and quite precludes the old style of separation and naming. However, if anyone is so inclined they can readily secure from a thousand of **Clovena Hybrids**, many hundred distinct kinds that could readily be separated and named, and be superior to the many new named kinds at novelty prices. Clovena Hybrids are all first-class novelties. We earnestly invite comparative and competitive trials along side of the best from any source or at any price.

Size of Bulbs

Unfortunately the gems in Gladioli seldom produce large bulbs, hence Clovena Hybrids do not come in giant bulbs—it is a well-established fact, that strong well matured bulbs of $\frac{3}{4}$ inch in diameter will, under good cultivation, throw grand spikes of flowers, this applies as well to the common strong growing reds that make monster bulbs. Therefore where quality is wanted, we grade No. 1 size from 1 inch in diameter and up and warrant best results. Beware of mammoth bulbs usually exhibited on counters; it means comparatively few colors and those of the strong growing kinds. When the greatest possible range in form and color is wanted we advise ordering No. 1, 2 and 3 sizes, as some

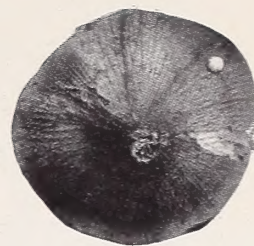

of the rarest kinds do not usually grow over $\frac{3}{4}$ inch. At Clovena under favorable conditions, many blooms appear on the beds planted to bulblets and we often cut bloom from the beds planted with seed, the first season. This of course is due entirely to the special nature of the soil and moisture, but when a little pains are taken to plant in rich, well drained soil, with proper moisture provided, sizes No. 4, 5 and 6 will give abundance of salable bloom, besides making a fine stock of salable bulbs in one season.

These new forms of Gladioli are without equal either for bedding, massing or for borders in private grounds, also in Parks for masses of color. In fact when quality as we now offer, can be had at such reasonable prices, they should be included in all kinds of color effect and bedding work.

As a cut flower they are far superior to any other summer bloom, either for lasting qualities or for the various uses in which they can be employed. Florists cannot afford to be without a good supply for their own retail use or to fit in with their other market crops, as the blooms come at a time July, August and September when there is not much else available for florist's work. For a continuance of bloom plant the three first sizes Nos. 1, 2 and 3 early in season and better results will be obtained than if large bulbs are planted at different dates. Early planting to secure a good start, before the heat of early summer, produces better flowers and consequently better bulbs in the fall. In planting three sizes all at one time, No. 1 will bloom first, No. 2 next and No. 3 last, keeping up a continual supply of flowers from middle of July until frost. Note following popular prices.

Clovena Hybrid Gladioli

	Each	Doz.	100	1,000
No. 1 Bulbs, 1 inch and up to $1\frac{1}{4}$ inch in diameter	\$0 04	\$0 22	\$1 55	\$14 00

Am. Hybrid Seedlings

This stock equals if not excels the usual hybrids offered. It contains a great variety of colors and markings, and we offer it at just **half above prices** in all the sizes, making it a very desirable stock to buy to sell again or to grow or to produce bulbs. It is worth much more than the price we offer it at.

Ordinary Gandeensis Mixed

We have a small stock of this which we offer at following low prices.

Pansy Plants

We have a limited stock of extra strong and stocky Pansy Plants, wintered over outside in seed beds and showing bud, of our three celebrated blends, N. Y. Giant Market, New Buttercup and N. Y. Improved Fancy Show, which we will close out at the uniform price of \$2.00 per 1,000; \$3.50 per 2,000; \$7.50 per 5,000.

CLOVENA GRASS SEED

Sow American grasses on American soil; that is, grasses that are either indigenous to our climates or those kinds that have been acclimated and are grown and seeded here.

With the era of close cropped turfs on lawns and grass plots, came the discovery that in the vast expanse of this continent of varied climes several native grasses grew that produced the ideal permanent sod required for lawns.

With improved machinery, clean, heavy seed can be furnished, one bushel of which will weigh more and go further than three when the seed is encased in the chaff.

In the mysteries of "mixtures" much foul stuff often finds a dumping place, in the way of objectionable stocks, containing weed seeds, or of low germination, and surpluses of undesirable kinds.

It is necessary to use more caution in the purchase of grass than of any other seed, as its appearance counts for little. To

ascertain the germinating power, usually means the risk of a season's growth. It cannot be sprouted for percentage like grain—conditions of temperature and moisture are not easily made artificially, such as abound in nature in early Spring. All our selected grass seeds are tested as to purity and germination, by sample, at Zurich, Switzerland, the most reliable source for such data.

We can furnish seeds that weigh from 14 to 32 lbs. to the measured bushel, with germinating power from 20 to 85%. With this information at hand, supply can easily be computed to cover requirements. We will esteem it a pleasure to prescribe as to kinds, quality and quantity required when full information is given as to needs—character of soil, situation and purpose. We offer the following grades, which cover a majority of uses:

CLOVENA.—Extra heavy, clean, tested seed, weighs 20 lbs. to the bushel, and 80 to 85% grows. Composed of the finest grasses for making lawns, putting greens, tennis courts, cricket grounds, re-

novating spots in old lawns, etc. Superior for exposed situations, producing, under favorable conditions, permanent, elastic and resistant velvet turf of emerald green in six to eight weeks. For first class work, sow four bushels (80 lbs.) to the acre; and good results can be obtained with three bushels. Price, quart, 15 cents; peck, \$1.00; bushel, \$3.00; per 100 qt. boxes, \$12.50.

MANHATTAN.—First-class mixture for all around purposes, 60 to 65% grows, it is free from weed seed, and weighs 15 lbs. to the bushel; requires five to six bushels to the acre. Price, quart, 10 cents; peck, 75 cents; bushel, \$2.00; per 100 qt. boxes, \$8.00.

CENTRAL PARK.—A good mixture, that grows 50 to 60%, weighs 15 lbs. to the bushel, and requires from six to seven bushels to the acre. Price, quart, 8 cents; peck, 50 cents; bushel, \$1.50; per 100 qt. boxes, \$6.00.

Full directions how to prepare and sow the lawn furnished with each package.
